Comments

The combination of HRC-I detector and HETG gratings has not been used before on the Chandra mission. Users should be alert to possible issues due to this mode. ===== The software module celldetect normally computes the zeroth order image size using a guess of the cell size provided by calibration files. There is no cell size available for the combination HTC-I HETG to make this calculation. The user can probably insert the information manually in CIAO. The PSF and off-axis region determination are not supported for this configuration. === The zeroth order has been located correctly.
