A Summary

A.1 Status

V&V Scientist	Joy Nichols
V&V Date (YYYY-MM-DD)	2009.11.19
V&V Edition	1
V&V Disposition and Status	OK
V&V Charge Time	9

A.2 Comments

A spatial exclusion window was specified for this observation.

Although

6 CCD chips were active, only events from chips 6 and 7 were telemetered.

=====

Due to telemetry saturation, the effective exposure time is substantially less than the duration and may vary from chip-to-chip. This is expected for bright sources.

=====

=====

Focal plane temperature is warmer than -118.7 C degrees during the entire observation. This temperature is the upper limit of the verified ACIS calibration for the front-illuminated chips. The focal plane temperature is warmer than -116.7 degrees C for the entire observation. This temperature is the upper limit of the verified ACIS calibration for the back-illuminated chips. The ACIS spectral response calibration is less accurate at these warmer temperatures than it is at -119.7 C. Users whose science objectives depend on the most accurate spectral response (ie: fitting line-rich spectra) may notice an effect. Users whose science objectives do not depend on the most accurate spectral response should not notice an effect.
