Comments

Node 2 on CCD 0 has a slightly enhanced feature that is about 4 columns wide. The elevated adu values in this feature are only about 2 adu higher than the median adu value of that node. We do not repair bias maps with 'exacto-knife' features less than 5 adu elevated from the mean of that particular node. Therefore, no correction had been made to the bias maps for this obsid. The user can request such a correction if the scientific value is affected.
