V&V Disposition and Status	OK
V&V Charge Time	54.42523

A.2 Comments

This observation was taken during a high radiation environment. Chip S4 of this observation has a very high background due to the radiation. In this case the events due to radiation on chip S4 were not completely removed in the Level 2 processing. I note spikes in the count rates at about 31 ksec and 35 ksec into the observation. The outer portion of the supernova remnant directly east of the pulsar falls on S4. The science goals of this proposal do not include analysis of the supernova shell or outer shocks, so the radiation issues do not affect the science quality of the data. While the front illuminated chips have several intervals of non-Good-Time, the back illuminated chips, including the target, have nearly complete Good Time coverage.

The ACIS focal plane temperature is above calibration limits for the first 30ksec of the observation.
