A.2 Comments

Glenn,

The bias file for chip 5 has a column with high adu values (about 90 adu above the surrounding pixels. This column is apparently not marked bad because it can be seen in the Level 2 data. This is a CTI, so maybe this is appropriate behavior. Can you check it?

The column (CCD_ID,CHIPX) = (5,233) is anomalously high in the bias file acisf337206124N002_2_bias0.fits. The column (CCD_ID,CHIPX) = (5,226) is also about 10 adu high. These columns are part of the region (CCD_ID,CHIPX) = (5,232-251) that is marked as bad in the bad-pixel file acisf57618_000N002_bpix1.fits. As a result, the file acisf57618_000N002_evt1.fits has STATUS bits 4 and 5 are set to one for all of the events in this region, including the events on the two columns with bad bias values. These events are excluded from the file acisf57618_000N002_evt2.fits.

The bias file could be fixed, if there is an interest in doing so, but I think that it is not imperative since this observation is a calibration observation.

Glenn
