A.2 Comments

Fid lights are distended, though within spec. The `img_roll_rms` has an odd peak, within the `mtl` limits but still noticeably higher than the rest of the observation, approximately 7 ksec into the observation. Aspect review determined that the aspect solution is acceptable.

As a consequence of the DEA-A shutdown anomaly on Sep 15th (DOY258), the reported value of the ACIS FP temperature was ~1.3 degrees warmer than the actual temperature. GOs should subtract 1.3 degrees from the reported temperature to determine the true temperature.
