## Comments

The telemetered bias image for CCD\_= 7 showed a shift in column number for all pixels in rows 705-713. The ACIS team was at first unable to correct the telemetered data, so an earlier processing of this observation used a bias file that was reconstructed using scaled data from a comparable bias map to fill the data gaps. However, the original bias file has now been recovered from telemetry, and the observation has been reprocessed without manual intervention.
