

- **delcomp: delete a model component**

Delete one or more components from the current model.

Syntax: **delcomp** [modelName:]<comp num range>

where

 <comp num range>

is range of positions in the model specification of the components to be deleted.

Examples:

Suppose that the current model specification is

 wa(po+ga+ga).

Then

```
XSPEC12> delcomp 3-4
           //Changes the model to wa(po)
XSPEC12> delcomp 1
           //Changes the model to po
```
