

thaw: allow fixed parameters to vary.

Allow indicated parameters to vary. (See also freeze).

Syntax: **thaw**{[<param range>...]}

where

<param range> ::= [modelName:]<param #> | <param #>-- <param #>

For response parameters (see **gain** command):

rthaw {[<param range>...]}

where

<param range> ::= [sourceNum:]<param #> | <param #>-- <param #>

The indicated parameter, or range of parameters, will be marked as variable by the fitting commands and treated as a fitting parameter in subsequent fits. By default, the range will be the last range input by either a **freeze** or **thaw** command. See the [freeze](#) examples for an example of the use of the thaw command.
