## Comments

Gain and CTI correction are not well calibrated on CCD\_ID 5 (ACIS-S1). Default order sorting can clip some regions, particularly longward of 30A (first order). User-specified custom processing parameters may be required in tg\_resolve\_events (osipfile=none, osort\_lo, osort\_hi ~0.5) though this can allow more zeroth order background at short wavelengths.

====

Due to a spacecraft commanding error, the obsid transition occurred 33 seconds from the Kalman lock end of the previous obsid. So there were 2 Kalman locks at two different attitudes. For this processing, first three \*aipr\* files were removed from list due to two KALMAN locks at two different attitudes.
