A.2 Comments

Standard software processing technique using the tool tgdetect failed to determine an accurate position for the zeroth order for this observation. The source is extended and assymetric. The processing software defaulted to the coordinates supplied by the user as the position of

the zeroth order for the grating spectral extraction. For grating analysis of localized X-ray emission withing the extended emission, the investigator

will need to extract one or more dispersed spectra using user-defined zeroth order positions for all positions of interest.

Coordinates used as zeroth order position for extracting dispersed spectra
in this processing:
