Comments

The observation was executed with an inclusion window around the zeroth-order image from columns 180 to 330, with a sample cycle of 15 (meaning that every 15th event is telemetered), and with a PH filter from 500 to 2500 PHAs. The columns on CCD chip S3 outside of the range 180 to 330 were not telemetered at all. This is not what the PI wanted. Dispersed spectral data that may be critical to the program have been lost. HEG minus order lost 0-1 A, HEG plus order lost 1-4A. MEG minus order lost 0-2 A, MEG plus order lost 0-8 A (all approximate).
