Comments

Bad pixel map has a streak on the east/west direction at about $-29^{\circ} 31'$ declination. The streak is bright at the position of a bright source on the event image, which is normal. But the streak in the east-west direction is unusual. The count rate in the streak is very low, however.

The current observation has been reprocessed as part of Repro III ('C' supplement) the purpose of which is to update all HRC-I ObsIDs since Jan 2000 to the latest calibrations available for that configuration. Specifically, we are updating the DEGAP solution and the Gain Maps applied. For more information see the Repro IIIC web page at
