Comments

The ObsID series 1319-1382 were intended to access the HRC-I gain variation across the detector as a function of MCP HV. They were performed as triples (3 different HV settings at each Y-/Z-offset). The best HRC-I focus was not determined at the time the observations were performed (the data to determine that were being analyzed during this series).

=====

Charge time for this ObsID remains at previous value of 1.274 ksec, although with the current processing the charge time would have been 1.276 ksec.
