Comments

The fid light in slot 2 was removed from the aspect solution due to poor data quality: it was only tracked 8.81% of the observation. The fid light in slot 0 was unused. The aspect solution was deemed acceptable for calibration. Window constraint met.

The current observation has been reprocessed as part of Repro III ('C' supplement) the purpose of which is to update all HRC-I ObsIDs since Jan 2000 to the latest calibrations available for that configuration. Specifically, we are updating the DEGAP solution and the Gain Maps applied. For more information see the Repro IIIC web page at
