Comments

Source is extended and asymmetric. Zeroth order is near the brightest position,
but may not be the position of interest. Users should verify that the zeroth order position is correct for their analysis.

WARNING: there are no standard ciao tools for analysis of grating spectra from extended sources. The shape of an emission 'line' will be the shape of the zero order spatial structure convolved with the instrumental LSF. Grating extractions can be used, but need to be combined with custom spatial-spectral analysis, since wavelength is multi-valued at any particular diffraction angle.
