V&V Disposition and Status	OK
V&V Charge Time	78.94

Comments

The data contain 2 spectra. The binary separation is about 5 arcsec in the cross-dispersion direction. Care should be taken to extract the sources separately. In this processing, the zeroth order position for spectral extraction is centered on the star in the northwest position, although standard processing has been used and no attempt has been made to exclude the second star from the background. Dispersed spectra of these 2 stars can be separated using CIAO tools.

===These are high proper motion stars.
